

The second line cannot assemble six things.

When the AI question arrives, the evidence is
in six different rooms.

THE SIX ITEMS (1-3)

1

What AI is in use

By whom. Approved by whom.

2

Which data can enter it

Customer and employee data, per tool.

3

Which policy applies

To each tool, not in general.

THE SIX ITEMS (4-6)

4

Which controls are logged

And where the log actually lives.

5

Who was trained

On the real failure mode, not the slide.

6

What you hand the regulator

On the day they ask. Not the week after.

THE REFRAME

**None of this is a
framework problem.**

**It is an assembly problem.
The parts are in six
different rooms.**

THE QUESTION

Which of the six is missing in your firm today?

Find your gap in five minutes. Link in the first comment.
